Greetings from the CEO

February 15, 2023

Min General Surgery Hospital is playing a leading role in K-medical care.

FIRST & ALWAYS THE BEST!

Hello. Thank you for visiting the website of Min Hospital.

Min Hospital specializes in surgical operations such as thyroid and diabetic obesity metabolic

Jong Min Kim Representative Director

Seoul National University M.D. / Thyroid specialist / Seoul National University clinical advisor/ Adjunct professor at Samsung Medical Center / Adjunct professor at Korea University Hospital

surgery. Min Hospital is unique in tumor treatment in the thyroid, breast, and digestive fields, as well as vascular, diabetes, and obesity treatment. In particular, Min Hospital has the world's largest record of surgery in the fields of thyroid endoscopy, digestive endoscopy, and varicose laser treatment.

The excellent treatment procedures at Min Hospital are currently recognized among American, Australian and European medical societies for outstanding achievement. The complication-free treatments for patients visiting from Southeast Asian countries including Indonesia, and from Kyrgyzstan along with many other countries in Central

Asia, contribute towards indicating the superiority of Korean medical care.

Min Hospital is characterized by seeking to minimize pain for patients through the micro invasive surgery treatment. The hospital embraces the principle that the “patients’ needs are of the highest value,” and will continue in the research and development of safer and improved treatment methods.

Thank you again for visiting the website of Min Hospital.

About Min Hospital

Since opening in April 2008, The MIN Hospital has built a reputation as a thyroid, breast, and laparoscopic specialized hospital through specialized medical services and customer satisfaction services based on the belief of “serving patients.”

Currently, we are specialized in thyroid endocrine center, breast cancer center, colorectal disease center, laparoscopic surgery center, digestive endoscopy center, vascular surgery center, and hyperobesity metabolism center, and have built a medical environment that can

solve all surgical diseases.

Korea Surgical No. 1 Private Hospital provides a high level of medical service through innovative thinking through constant challenges, passion, and learning.

Surgical hospital with abundant clinical experience

We provide satisfaction through specialized medical services and customer satisfaction services.

A hospital that serves patients first

By introducing the 'patient-centered medical system' and 'center for innovation (CFI)' of the Mayo Clinic in the U.S., we are striving to promote the stability of each patient and provide prompt, accurate and customized treatment.

We introduced a professional nurse system for the first time as a private medical institution, and are implementing 1:1 intensive management system for pre- and post-surgery management and chemotherapy, and we are doing our best to solve the inconvenience of patients at any time by operating a 24-hour call center.

Differentiated high-tech medical facilities

The MIN Hospital claims to be a ubiquitous hospital.

Through a state-of-the-art information management system, patient information is shared with partner university hospitals, and a system has been established so that medical services of the same quality can be received anywhere.

In terms of medical equipment, the MIN Hospital is confident that it is a first-class hospital for microinvasive surgery.

It is the first laparoscopic operating room (Stryker, U.S.A.), which is rare in university hospitals, and has surgical precision that can replace robotic surgery by introducing 3D laparoscopic surgical medical equipment.

Continuous academic research activities

Since opening in 2008, we have been consistently presented at the World Thyroid Endoscopic BABA Symposium every year and have taught standard surgical procedures for endoscopic BABA surgery to surgeons in China, Southeast Asia and the United States.

The MIN Hospital constantly researches and strives to provide better treatment.

With the philosophy of “change” but “serving” without “change,” we will realize the world’s best surgical hospital beyond Korea.
